

SMART[®]

Accessible environments for all learners

SMART solutions support inclusive learning environments by increasing access to participation and engagement for all students.

Ask your SMART representative about how the free software included with every SMART Board interactive display helps create accessible learning environments.

SMART solutions support accessible environments for ALL learners

Inclusive design

We give teachers AND students options for where and how they want learning to occur.

Tools like our Magic Pen help focus attention clearly and intuitively. And the option to toggle between **teacher and student-led navigation** opens up a world of possibilities for students to focus, comprehend, and display learning, while working at their own pace.

The **range of activity types** available facilitates lesson design that includes all learners.

Inclusive voice

Every student wants to be heard, and with SMART, that's truly possible. Do your students want to access content from the main board or on their individual devices? The **choice** is theirs.

Discussion tools like Shout it Out and Whole Class Whiteboard give all students a voice in class discussions by providing flexibility in how they contribute.

Inclusive access

With SMART, students can work where they need to - whether that's **collaborating** together on a board or on their personal devices. They always have access to the content they need, how they need it.

Hands-on manipulatives and Tool Explorer Cubes allow all students to physically demonstrate learning.

SMART features for Accessibility

Intuitive touch 40 points of touch, tools and palm reject facilitate seamless collaboration while allowing students to lean on the panel for support.

SMART Ink allows all students to work together at the same time in diverse ways.

Tool Explorer supports aided language instruction and helps all students to focus in the classroom.

Manipulatives allow students to practice and bridge abstract to physical concepts without relying on spoken language.

Pacing and viewing options help manage focus and allow students to zoom and adjust content to meet their needs.

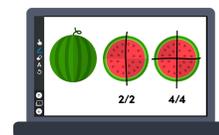

Supports hardware. Students can connect their accessibility devices to the SMART Board 6000S.

Lumio supports inclusive learning with unique features like:

- Manipulatives
- Immersive reader
- Instructional audio
- Lesson pacing
- Flexibility
- Device support
